Visualise Your Security Needs

Saving footage

Select "Select target Folder"

This window will open up

Navigate to and select folder to save in to and take note of the destination

Give the saved file a meaningful name (I suggest using the date and the subject in the file name to assist when searching at a later date)

When complete select the tick to commence the back up

The backup can be opened,
viewed and checked using Pview

To open the backup, right click
and select “open Local Track”

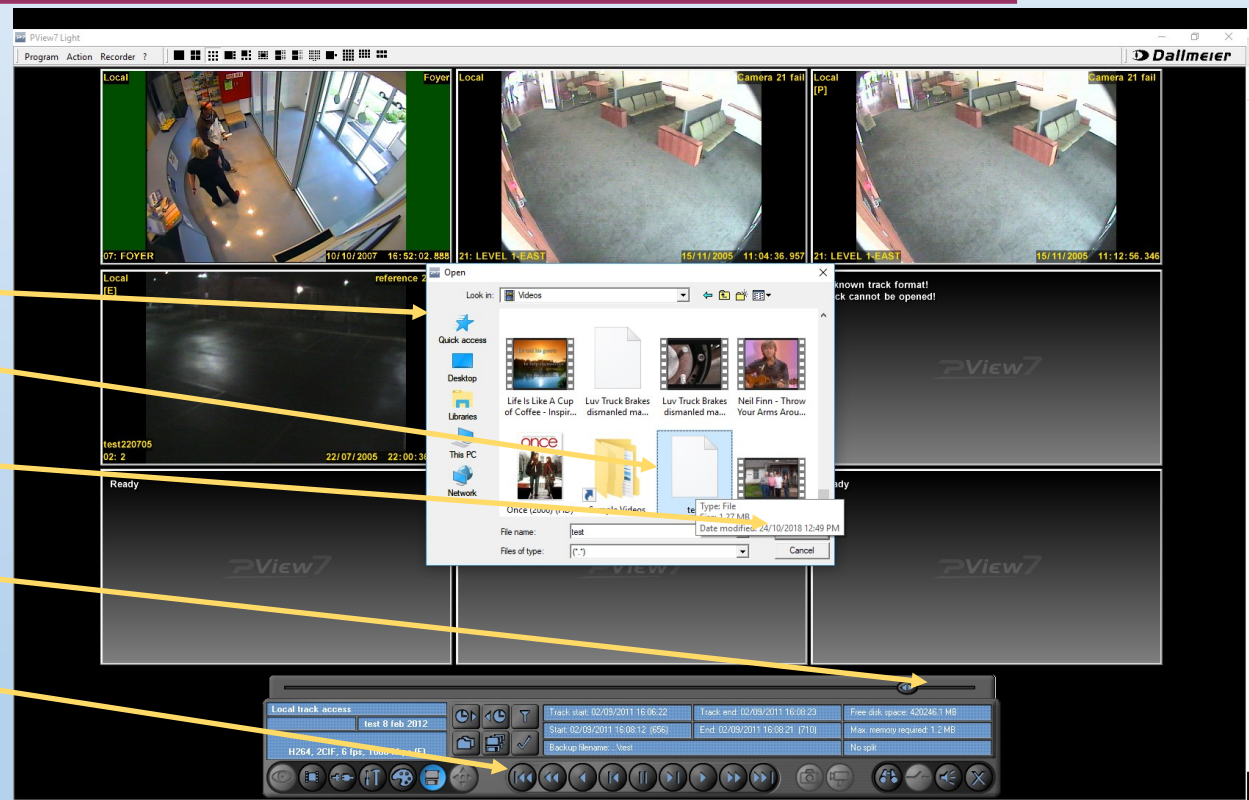

Navigate to the saved location
and select the backup to be played

Select “Open”

The back will default to the end of
the backup

Select this button to go to the start
of the backup

Then select play FFWD play speed
etc

Finally, to play this backup outside of the this CCTV system the saved backup files can be saved on to external media such as CD DVD SD card or USB memory.

These files must be saved with a copy “Process viewer” or “Process Viewer Pro” (and its associated files)

These files or the Process viewer Pro folder can be found on the Pview workstation
